JOINING

Individuals who are interested in joining our unit come from a variety of backgrounds, interests and experiences. The recruit may be transferring from a different Parachute Unit, transferring from an Infantry Unit or may be new to reenacting. To accommodate these different individuals, our unit is divided into two basic groups: Company E, 608PIR and Company L, 325GIR.

CONTACT

WE WANT YOU FOR THE 82ND AIRBORNE

OUR UNIT

We are the 82nd Airborne 508PIR (Parachute Infantry Regiment) Living Historians. Our unit recreates the U.S. Army Airborne from 1942 to 1945. Using period uniforms, equipment and weapons, we recreate an accurate rendition of the brave men who fought in WWII. We honor those who have served honorably. Based in PA, we participate in public displays, educational seminars and tactical events. The 508PIR is featured in the book "Parachute Rifle Company."

REQUIREMENTS

New recruits to the 608PIR need to be at least 16 years of age. Troopers have the option to wear either the M42 or the M43 uniform. A new trooper must adorn himself with a pair of the coveted "brown jump boots."

The 325GIR (Glider Infantry Regiment) was created for individuals who want to join our unit and have already invested in the gear necessary for an infantryman's impression. The 325GIR soldier wears the same M41 jacket, wool pants and leggings as does any other infantry soldier. The Glider Trooper may also wear the M43 uniform. In order to join our unit, the trooper merely has to affix the 608 Airborne patch on his sleeve and put the Airborne patch on his garrison hat. For more information visit our website: www.508pir.com.

ADEC

Advanced Detection of Electronic Counterfeits

The Advanced Detection of Electronic Counterfeits (ADEC) system consists of two primary components: The ADEC Sensor and the Integrated Antenna Enclosure (IAE). Key benefits of the ADEC system include:

- The detection of anomalies in parts
- Detection of counterfeit and verified authentic parts
- Enhances military capability by removing substandard electronics from weapon systems
- Prevents system failures, significant delays and redesigns and cost escalation

-----VISIT OUR EXHIBIT-----

The non-invasive ADEC system detects counterfeit electronics within seconds.

The ADEC System is based upon combining Nokomis' Hiawatha sensor, matured through over \$15M in Government and private investment, with the Integrated Antenna Enclosure (IAE) and custom software developed by Nokomis over the past seven years to provide the capability for rapid automated measurement and detection of counterfeit electronics. The system is offered in two configurations, a 4 channel and a 2 channel system. Channels are highly integrated signal processing equipment. A four channel system can process data twice (x2) its fast as a two channel system but also doubles the amount and cost of processing hardware inside the system. Two channel configurations are designed to handle low volume part testing such as at specialty maintenance depots and supporting testing laboratories. Four channel system are designed for large scale inventory testing, vendor pre-ship testing, and vendor qualification. ADEC has been specifically engineered to perform 100% inventory testing in order to detect sales in counterfeit and defective parts. ADEC testing can handle ICs, FPGAs, passive components, and smaller populated PCBs.

PASSAGE TO AMERICA

ADJUSTMENT OF STATUS

M.C. DEMAN & C.R. JOYCE

A TALE THAT WILL TAKE YOU ON A ROLLER COASTER RIDE OF DREAMS, PASSION, DECEIT, AND UNEXPECTED TWISTS IN THE AMERICAN PURSUIT OF HAPPINESS.

A CONTEMPORARY ROMANCE OF FICTION

A MALOONIAN IN THE HOOD

Latron Williams

Opposites attract. *A Maloonian in the Hood* is a tale about a connection that happens between an alien and a human and grows into infatuation, then curiosity, to lust, to love. Everyone has had that one odd person they were just heard over heels for and went all the way for a reason they don't know. This universal tale that has something for everyone will remind you that it's okay to go for what you know, if it's what you like, it's what you like.

About the Author
Latron Williams is 38 years old. He was born in Florida but now resides in Myrtle Beach, South Carolina. He enjoys working out and taking walks to the beach. Managing two jobs as a dishwasher can be tough, so he has to stay fit and uses the walks to the beach to help slow him down a bit because his jobs have him moving at a fast pace all day, six days a week. A special interest that he has is to become an entrepreneur. Creating things is what he loves to do. That's why he's been able to write 27 books in five different genres, which he plans to bring out as well one day. Latron also has a daughter, who will be 18 in a few months.

THE WORLD'S FIRST INTELLIGENT MOTORCYCLE JACKET!

LED Safety Jackets are Custom Crafted and Tailored to your specific Body Mass Index. The purpose of a leather jacket is to keep your bones, and organs, in one place and compressed until help arrives. If you ever have the misfortune of being in an accident it is better for that to happen, your Riding Jacket has to fit you like a Glove! Every aspect of the H.I.J. revolves around your Safety. This Exclusive Process may take longer than off the rack coats that want to try to duplicate the H.I.J. But we only do things one way here at LED. And truth the "RIGHT WAY!"
